

**FROM THE CORNISH ENERGY COMMITTEE
INFLATION REDUCTION ACT FORTHCOMING TAX CREDITS & REBATES**

The Inflation Reduction Act (IRA) will provide new tax credits and rebates for home energy improvements, electric vehicles, solar, batteries, heat pumps and more. You can find the most up-to-date information on these credits and rebates [HERE](#). The material was created by these two U.S. House Committees: Ways & Means, and Energy & Commerce. You can view more information at energy.gov/Newsroom and energy.gov/scep/home-energy-rebate-program

At this time, these rebates are **not** available. USDOE is currently conducting stakeholder outreach, developing program guidance, and hosting listening sessions with key stakeholders. Rules and guidelines are expected to be provided by mid-2023. Then states can submit applications for the funds, explaining how they will determine income eligibility, energy reduction results, train contractors, administer discounts through contractors' invoices, etc. Finally, funds will hopefully be awarded by end of 2023 or early 2024.

NHDOE is also working on a webpage to advertise updates on the Inflation Reduction Act (IRA) program that will be live in the near future. In the meantime, you can learn about the federal Infrastructure programs at NHDOE's IJA webpage: [Infrastructure Investment and Jobs Act \(IJA\) Funding Programs | NH Department of Energy](#). Interested parties can also learn more at USDOE's rebate webpage here: [Home Energy Rebate Program | Department of Energy](#)
